

REVOLUTIONIZING DATA ACCESS

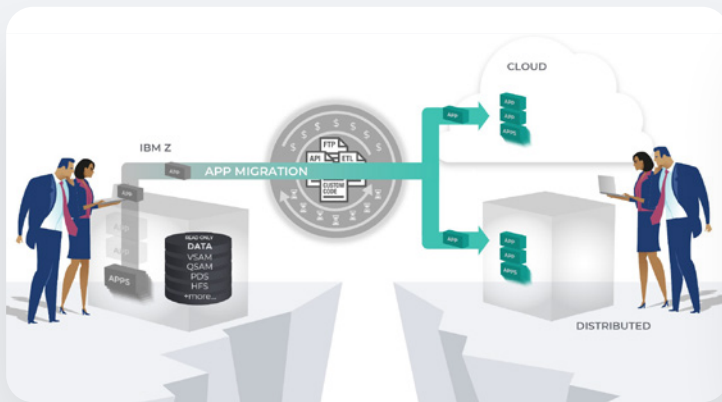

Lozen™ software is VirtualZ Computing's revolutionary solution that unlocks the power of real-time, read-write data access — enabling your organization to run on a single source of truth while maintaining data integrity and security.

With Lozen, custom and packaged applications running anywhere — in the cloud, on distributed platforms or on mobile devices — have real-time, read-write access to always-in-sync data on the IBM Z platform.

LOZEN FOR APPLICATION MIGRATION AND RE-PLATFORMING

Application migrations increase demand for data access

Customers spend millions of dollars, write custom code, and consume costly MIPS capacity on legacy data access such as ETL, FTP and change data capture to lift and shift mainframe data to their cloud and distributed platforms.

Eliminate ETL and other legacy data access methods with Lozen

Lozen reduces risk and expedites application migration projects by eliminating the need to move or replicate data as part of the migration.

LOZEN PROVIDES MANY BENEFITS TO APPLICATION MIGRATION AND RE-PLATFORMING PROJECTS, INCLUDING:

- ✓ Reduced risk — with Lozen, the data stays where it is, so applications that aren't being migrated don't have their data dependencies broken
- ✓ Faster migrations, creating success much earlier in the process
- ✓ Increased business agility
- ✓ Scalability — Lozen removes the need to move data during the migration process. As a result, customers can move a higher volume of applications, and more applications become candidates for migration.
- ✓ Lowered project costs — Because you don't need to move the data with Lozen, you can move just the applications, reducing costs associated with data access demands and maintenance.

LOZEN™ PRICING

In addition to revolutionizing data access, our goal is to revolutionize the pricing and licensing models that go with it.

At VirtualZ Computing, we had the luxury of starting with a clean sheet of paper, creating uniquely simple, transparent and easy to manage pricing and licensing models. In addition to the cost savings and functional benefits of our products, our licensing and pricing models reduce customer operating costs by lowering management overhead, avoiding un-planned license fees and eliminating costly compliance audits that result from legacy models.

Lozen™ software is licensed as a one-year subscription, including license and maintenance.

60-Day Evaluation	Subscription License
No Cost	\$100k per petabyte per year

EACH LOZEN LICENSE INCLUDES THE FOLLOWING:

- The zIIP-enabled low-code, no-code Lozen NFS server
- Unlimited LPARs, sites and installations for your enterprise
- All data types supported by Lozen, including VSAM, KSDS, RRDS, ESDS, QSAM, BSAM, BPAM
- Micro Focus Enterprise Server integration for Window and Linux
- SMF recording to easily monitor your Lozen managed data
- Special pricing available for multi-year subscriptions
